SAUER
CONTINENCE

Manfred Sauer Foundation

Meaning in life

In 2007 we celebrated the 25th company anniversary here at Lobbach in Baden. You can guess from the outlines of the buildings (above left) that we have remained a medium-sized, independent business that is successfully engaged in helping customers in coming to terms with incontinence problems.

Further to the well-established and proven urinary condoms we have now added a single use catheter, which is furnished with a novel soft tip that finds its way to the bladder more easily and without any risk of injuries. Like all the components of our continence system this catheter is manufactured on our premises in Germany and thus provides new jobs.

Not being spared by the ravages of time myself, I started wondering what was to become of the Manfred Sauer Company? How can the jobs in Lobbach and the pursuance of the individual approach be secured? Last but not least

how can the economic success benefit those that brought it about?

Our Foundation concept is the positive answer to these questions. As the owner of our company it safeguards the production site and attends particularly to people with paraplegia seeking (re-)orientation.

On 21. May 2006 the Manfred Sauer Foundation Centre (above right) was opened and since has received a very positive response not only from wheelchair users, but also from the local population. With their lively interest in the widespread offers of the Foundation they ensure that this institution doesn't turn into a pure disabled facility, but a meeting place for all people regardless of physical impairment.

Yours,
Manfred Sauer

The urinary condoms have been designed and manufactured in our factory at Lobbach in Germany and have the necessary characteristics to ensure a secure, reliable and simple handling and, last but not least, a high wearing comfort.

Urinary condoms

Material: Synthetic material or latex

Fixation: Self-adhesive or with skin adhesive/adhesive strips

Irrespective of their specifications, all our urinary condoms have the following properties in common:

11 sizes: You can get an exact fit as we have eleven finely graded sizes (diameter 18–40 mm). The better the fit, the safer the adhesive contact.

Synthetic material: The condoms and skin adhesive are latex-free. This prevents irritations and allergies that can occur with latex.

The high elasticity of the material: The extremely high elasticity of the material allows for large amounts of spontaneous urine and, at the same time, a residue free drainage. Therefore no pooling occurs around the tip of the penis, being more hygienic and reducing the risk of infection.

Material strength: Made from very thin but resistant materials which ensure a snug fit and a reliable adhesion under all circumstances.

Double-dipped tip: To prevent tearing.

Connecting tube: The condom and connecting tube are manufactured all in one piece or are mounted with a nipple and are suitable for all urine bags with or without adapter.

Self-adhesive film: As it is inside the condom, this allows you to put it on quicker and more easily. It also gives a reliable adhesion between the condom and the skin.

100 % individually tested
To guarantee maximum safety all urinary condoms are tested *individually* for impermeability and tear strength.

Advice, samples, custom products
Have you got questions regarding urinary condoms? Would you like us to supply you with free samples? Do you have individual requirements (extra charge)? Please turn to your local continence adviser for further information ► page 48.

Choosing the adequate urinary condom

As a first step you should use the measuring tape (► page 15) to determine the required condom size. Because of the easy handling you should begin with the self-adhesive condoms SAUER Comfort.

For further alternatives or if you have any questions regarding the use of skin adhesives please turn to your local continence adviser ► page 48.

Articles made of latex

Many of our customers confirm a long-time use of SAUER urinary condoms made of latex without any reactions to the skin. Another point in favour of latex is the fact that it has undisputed advantages in comparison to synthetic material: As a natural product obtained from the rubber tree, its availability is nearly unlimited, and additionally it is environmentally friendly - both in terms of production and disposal.

One must keep in mind that synthetic rubber and silicone contain a multitude of chemical substances whose effects are not sufficiently known yet. The production and working of synthetic rubber, a product made of petroleum, is more complex and, because of its high content of solvents, more problematic in production and for the environment.

If you have concerns about the use of latex-containing condoms or skin adhesives or if you suffer from a hypersensitivity towards latex, you can change to latex-free products made of synthetic materials.

You will find more information about this topic in our "Continence Systems Tutorial". Please ask for your personal copy. It is also available on our website:

www.sauercontinence.com

SAUER skin adhesive

Liquid skin adhesives provide the safest bonding between skin and condom. Unlike the self-adhesive condoms they allow an individual handling; this means that the user himself can determine the required quantity of adhesive, the length of the adhesive zone and the size of the buffer zone. For more than 30 years SAUER skin adhesives have been used successfully for the fixation of urinary condoms.

Eudermic composition: We offer the skin adhesive in different compositions that match individual skin properties. The SAUER Original skin adhesive is composed of natural rubber, mastic as the adhesive component, heptane as solvent to determine the viscosity, lanolin (purified wool fat) to replenish the oils in the skin and zinc oxide for skin protection.

Adhesion effect: This varies according to the composition of the different skin adhesives used. The skin adhesives are as follows:

- Skin adhesives 50.01 and 50.03 provide adhesion which should in almost all cases lasts round-the-clock.
- The reduction of skin caring agents increases the adhesive strength (50.05 and 50.00).
- By adding resin, the adhesive strength can be increased further (50.20 and 50.22).

Water resistance: The skin adhesive allows you to wear the urinary condom in the bath or when swimming without impairing the adhesion strength.

Skin friendliness: Additional substances with skin care properties allow to use the urinal "around the clock".

Removal: Removal of the condom does not leave adhesive residue on the skin since the condom and the skin adhesive complement each other.

With tube: The pipette applicator allows a simple and clean application of the adhesive.

Self-adhesive condoms SAUER-Comfort

i In order to meet as many of the users' more specific requirements as possible, apart from the standard version (see below) we offer three special versions (► page 7) of the self-adhesive SAUER-Comfort condoms. The differences lie in the length of the adhesive zone and in the adhesive strength.

Condom and adhesive are made of latex free materials. Condom and connecting tube are manufactured all in one piece. To be used with all urine collection bags with and without adapter. Available in 11 sizes.

SAUER-Comfort – Standard

Total length approx. 175 mm, buffer zone 75 mm, standard adhesive.

The connecting tube is directly dipped to the condom and coloured differently depending on the type of condom. The area between the connecting tube and the adhesive zone is powdered and serves as buffer zone with a length of either 75 or 60 mm. It is followed by the adhesive zone with option for two adhesives different in strength.

Tip: In order to get used to the handling, you can order a thumb-sized condom.

This is a self-adhesive condom with a diameter of 22 mm. You can use it to test the separate steps of the adhesion procedure on your thumb and find out how to deal with problems if they arise, how to avoid crinkles and learn where the adhesive zone begins.

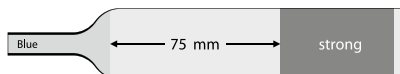

SAUER-Comfort – Blue

Total length approx. 175 mm, buffer zone 75 mm, stronger adhesive.

Self-adhesive condoms SAUER-Comfort

With the 3 special versions, you can identify the two distinguishing features (buffer zone and adhesive strength) by having a look at the order no.

Self-adhesive condoms without buffer zone

i Apart from the self-adhesive condoms SAUER-Comfort with the typical buffer zone, there are further models available with a more rigid funnel that can help to apply the condom e.g. when circumcised.

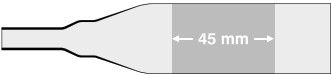

With the condoms *UltraFlex*, *Pop-On*, and *Wide-Band* the adhesive zone begins directly behind the funnel, where the condom is applied to the penis. The illustrations show the position and the length of the adhesive zone.

Please note that these condoms don't have an (elastic) buffer zone. The buffer zone can be necessary to cope with larger quantities of spontaneous urine as it can store the urine until it drains into the urine bag. However, some users regard the stronger material and the more rigid funnel as advantageous.

Self-adhesive condoms – UltraFlex **NEW**

Silicone condom with synthetic adhesive. Total length approx. 145 mm, the adhesive zone begins directly behind the funnel and has a length of approx. 45 mm. To be used with all urine collection bags furnished with an universal adapter. Individually packed.

SAUER skin adhesive

SAUER skin adhesive – Original

The skin adhesive which can be used without problem in almost all cases. It provides an absolutely reliable adhesion.

2 tubes, each 28 g

Order no. 50.01

SAUER skin adhesive – Without lanolin

Occasionally, lanolin may cause allergic skin reactions. This adhesive has the same properties as the “Original” – but is free of lanolin. However, it does not supplement the skin’s natural oils!

2 tubes, each 28 g

Order no. 50.03

SAUER skin adhesive – 50 %

Based on the “Original”, but with a 50 % reduction in skin care components (zinc oxide and lanolin). This increases the adhesive qualities.

2 tubes, each 28 g

Order no. 50.05

SAUER skin adhesive – Pure

Based on the “Original”, but without the skin care components (zinc oxide and lanolin). Strong adhesive qualities – you should therefore pay attention to the condition of your skin.

2 tubes, each 28 g

Order no. 50.00

SAUER skin adhesive – 2 % resin

Based on the “Original”, but with 2 % resin to increase the adhesive quality. Therefore, pay particular attention to the condition of your skin.

2 tubes, each 28 g

Order no. 50.20

SAUER skin adhesive – 12 % resin

Based on the “Original”, but with 12 % resin to give high adhesive quality. Therefore, pay particular attention to the condition of your skin.

2 tubes, each 28 g

Order no. 50.22

Choosing the right skin adhesive

It is simply impossible to recommend one type of adhesive for all situations, because every skin type reacts differently. You should first try our well-established “Original”. Only if you are not getting satisfactory results in spite of correct application you should try an alternative. If you apply an adhesive with stronger adhering properties you should carefully check the skin condition.

Please turn to your local continence adviser for further information ► page 48.

Special skin adhesive

The following skin adhesives may provide a solution for special skin conditions or when you have serious adhesion problems. Please contact your continence adviser ► page 48 about the suitability of the special skin adhesives.

White skin adhesive

Based on the “Original” 50.01, but with a modified ratio of the latex, hexan and zinc oxyde components. In tube with applicator.

2 tubes each 28 g

Order no. 50.31

SAUER skin adhesive – Synthetic *latex free*

Synthetic adhesive containing no latex or silicone. Comes in a glass bottle with a brush applicator in the lid or in a tube with a pipette applicator.

Adhesive in glass bottle, 45 ml

Order no. 50.36

2 tubes each 28 g

Order no. 50.36-2

U-Bond skin adhesive *latex free*

Liquid silicone adhesive, in glass bottle. If the adhesive thickens due to evaporation of the solvent, you can increase the viscosity by adding the solvent. Both Adhesive and thinner are latex free.

Adhesive in glass bottle, 44 ml

Order no. 50.37

Thinner in glass bottle, with applicator, 50 ml

Order no. 50.39

Medical Adhesive B spray *latex free*

Liquid silicone adhesive, aerosol.

Double-sided adhesive tapes

Double-sided adhesive tape has been found to be helpful in the care of the elderly, for bedridden patients and in intensive care units. It is also good for children and for all other cases where there is inadequate skin area for adhesion.

The adhesion strength of the various types of double-sided tape depends very much on the skin reaction of each individual. Therefore, we cannot know which tape is best for you. We would be more than happy to send you samples, so you can test which one suits you best.

Double-sided adhesive tape – Extra thin

Hydrocolloid tape, particularly skin friendly, very elasticated.

30 tapes	120 × 15 mm	Order no. 50.14-M
	150 × 15 mm	Order no. 50.14

Double-sided adhesive tape – Foam strip

PVC-foam-material. This tape increases the circumference of the penis through the thickness of the material, so you may need a larger condom size.

30 tapes	150 × 20 mm	Order no. 50.04
----------	-------------	------------------------

Double-sided adhesive tape – Urihesive

Hydrocolloid tape, particularly skin friendly, elasticated.

15 tapes	120 × 15 mm	Order no. 50.06
----------	-------------	------------------------

50.14
Handy box for easy removal

Alternatives

If by any chance none of the above skin adhesives or adhesive tapes suit your requirements, please turn to your local continence adviser for further information ► page 48.

Preventox skin protection

i Because of its high content of alcohol, Preventox has cleaning, degreasing and disinfecting properties and forms an elastic film on the skin, which allows the skin to breathe. Particularly the cleansing of the skin and the formation of the film usually improve the adhesive strength when you apply a urinary condom (self-adhesive, with skin adhesive of adhesive strip). In addition to this, it protects the skin.

Cranberry concentrate

NEW

The cranberry (*Vaccinium macrocarpon*), which is related to the native mountain cranberry, is a natural aid to strengthen the whole organism and keep it healthy, especially the urinary passage. This is due to a high percentage of natural antioxidants and secondary plant compounds.

Cranberry concentrate is a nutritional supplement – it is not a medication for the treatment of illnesses or symptoms and no replacement for a balanced and varied diet.

Due to long years of experience and scientific studies, the effects of cranberries are now well known.

Anti-adhesive effect: the proanthocyanidins contained in cranberries, prevent bacteria from settling due to special adhesive features in the bladder wall. This includes *Escherichia coli*, the most frequent trigger for urine infections. The bacteria are washed out with the urine, therefore preventing an infection.

Acidification of the urine: Cranberries have a low pH value and therefore taste sour. As their contents are distributed throughout the kidneys, the consumption of cranberries and/or cranberry juice acidifies the urine. An acidic environment prevents the multiplication of bacteria, which prevents urinary passage infections.

Antioxidant effect: The anthocyanins (polyphenol, flavonoids) and vitamin C in the cranberries have the ability to protect the cells in the human body from free radicals (antioxidant effect) and therefore strengthen the body's own defences and fight against cell damage. Furthermore, vitamin C strengthens the general defence situation.

Cranberry juice concentrate

Nutritional supplement to support a healthy bladder function. It is extracted by a gentle process using fresh North American cranberries. It contains no wheat, sugar, artificial colours or preservatives. Every capsule contains 400 mg cranberry concentrate and 60 mg vitamin C.

The effect of a capsule lasts for approx. 10 hours. For a “round the clock protection”, it is recommended to take a capsule every morning and evening.

Container with 100 capsules

Order no. 110.80

Further information about Cranberries: www.cranberryinstitute.org

The urine collection bags have been developed and are produced by us. They are manufactured on high-frequency welding machines at our premises at Lobbach. Their different shapes, sizes and various features make it possible to meet the particular needs and requirements of most users.

Urine collection bags

Bendi bags, leg bags, sport bags, discreet bags, functional bags, night bags

SAUER bendi bags

The bendi bag has been designed especially for wheelchair users. They are adapted to the sitting position and offer a high degree of wearing comfort, flexibility and security. Due to their great variety of features, they fit every user according to his individual need.

High capacity: Available in 1.3 litre, these give you more independence on long journeys and at work without the worry of having to find accessible toilets. The 0.7 litre bags are for wheelchair users that do not require the extra capacity or may be of a smaller build persons. Many able bodied and semi-ambulant people also use the 0.7 litre bags.

Leg hugging shape: Fitted with welded angled inlet tube, this is essential for a bendi bag adapted to the sitting position. It can be worn comfortably on the leg, is inconspicuous, has a reliable urine outlet and is easy to empty.

SAUER leg bags

Their design makes them particularly suitable for able-bodied people, but also for wheelchair users and children. You can wear them on the left or on the right leg. As a special feature, they are also available with a cotton backing, which further enhances the wearing comfort.

Capacity: Available in 0.6 litre or in 1.0 litre, it is intended for able-bodied people who do not usually have problems emptying the bag. Also, a smaller leg bag is not as conspicuous.

Inlet: The tube can be adapted to exactly suit your needs. This allows you to choose between wearing the bag on the thigh or on the calf. The enclosed loose adapter, smooth or stepped, is inserted into the (shortened) inlet tube of the bag. This way, you can connect it securely to all current condoms and catheters.

The cotton backing: Is made of natural cotton fleece. The leg bag is coated on one side only and remains transparent on the other side. As an alternative, you can use the SAUER cotton cover ► page 34.

Film with cotton backing

Textured film

100% testing

To increase security for the user, every bag is individually tested for leaks and functional capability.

Depending on their specification, SAUER urine collection bags show the following properties.

1 The connector

with or without universal adapter, this allows a simpler and safer connection for condoms with connecting tube, funnel condoms and catheters.

- no adapter: connect directly to SAUER condoms with connecting tubes.
- smooth adapter: connect to urinary condoms.
- stepped adapter: connect to catheters

2 The inlet tube

is hard or soft. As it comes in different lengths, it fits all body sizes.

3 The welded valve

allows for a smooth flow of urine, even with leg bags which do not lie flat.

4 The non-return valve

prevents urine backflow, for instance during physiotherapy sessions, and is important for infection control.

5 The eyelets

allow the straps to be fastened according to individual need, thus giving a more secure fitting.

6 The outlet tube

- swing tap: easy to handle, also with impeded dexterity of the hands, additional safety band available as protection against unintentional opening.
- turn tap: compact and discreet, particularly for small bags, collects to a night bag easily
- sliding tap: can be handled with only one hand; with this tap, the bag can be worn on the right or on the left leg.

7 The PVC film

is very strong and has a textured surface to prevent it from sticking to the skin.

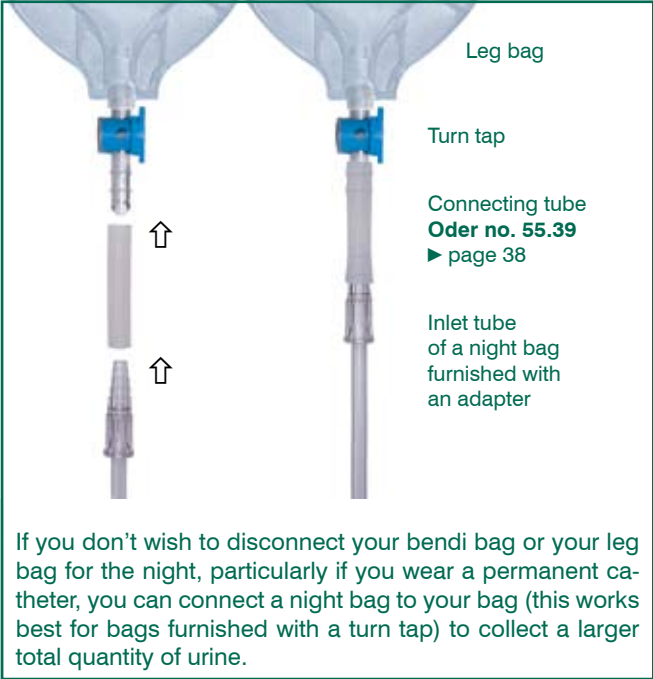

8 Welding

The welded valve, the non-return valve and the outlet tap are welded securely to the film. The double welding makes it stronger when full.

Custom made SAUER urine collection bags

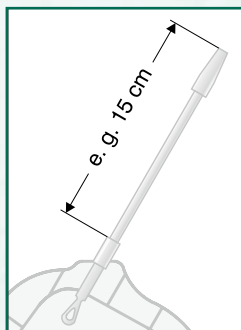

We have designed our range of products for bladder incontinence care to cover every need, yet they can also be considered as standard. We endeavour to constantly improve our products and find individual solutions wherever possible.

If you have any problems or questions regarding our standard range of products, please call us. We can advise you fully and try to find the best solution for your specific demand.

Inlet and outlet tube

Bendi bags in particular can be manufactured to meet your special requirements. However, we must sometimes charge a small fee for this. We can make the following alterations:

- shorten or lengthen the inlet tube (see picture on the right)
- fit an outlet tube instead of a swing tap, turn tap or sliding tap

How to measure the length of the inlet tube

Swing tap for lefthand users

For these customers we offer the bendi bag (► pages 22–24) with a swing tap turned around by 180°. This way the tap lies on the inside of the leg and is protected from unintended opening. For easy distinction, these bags are equipped with yellow tap “wings”.

Cotton backing

To prevent the leg bag from coming into direct contact with the skin, we can, for a supplementary charge, cover the leg bag with a layer of cotton material. For technical reasons, this cover can only be applied on one side of the bag. This means that these bags are only suited for right-handers.

We advise you to choose the cotton cover instead, as it can be worn on either leg. Furthermore, it can be used frequently and is washable. This method is more economical and environmentally friendly.

Sterile collection bag

A variety of sterile collection bags are usually on stock (► page 33). On request, we can supply all bags in a sterile version and individually packed.

How to order

Custom-made products have a delivery time of approx. 14 days; sterile bags, if not available off the shelf, have a minimum delivery time of 8 weeks.

There will be an extra charge for all custom-made bags. We can neither exchange nor take back.

SAUER bendi bag without adapter

For wheelchair users. To be connected directly to our condoms with connecting tube (97.xx , 97.xxxx.xx, 56.xx, 53.xx). This means that no adapter is necessary. You can also cut the tube to fit your size.

- Leg hugging shape; welded angled inlet tube; capacity of 1.3l or 0.7l
- **Inlet:** without adapter; hard tube, 20 cm, can be shortened; non-return valve
- **Outlet:** swing tap, turn tap or sliding tap

	swing tap		turn tap		sliding tap

Leg bag with fixed adapter

All-purpose bags for the able-bodied, wheelchair users and children. Can be connected to all urinary condoms and catheters. Can be worn either on the thigh (tube 8 cm long) or on the lower leg (tube 32 cm long).

- Rectangular shape; straight or diagonal inlet tube; capacity of 0.6 l or 1.0 l
- **Inlet:** fixed adapter with a protection cap; 8 or 32 cm tube which cannot be shortened; non-return valve
- **Outlet:** Push-pull valve or sliding tap

Inlet	straight		diagonal	
approx. 8 or 32 cm cannot be shortened				
	stepped adapter	780.8811-xx	780.8835-xx	782.8811-xx
				783.2835-xx

- Available in boxes of 10, 30 or 50. Please replace the “xx” within the order no. for the size of the unit (e.g. 780.8811-30).
- Fixation material for bags: leg straps ► page 35, cotton cover ► page 34, leg bag holsters for bags with 0.6 l ► page 36.
- Sterile urine collection bags ► page 33.

Note: The tube and the tap are not ring welded as with the SAUER leg bags. For this reason slight leakages might appear when stored for a longer period due to material fatigue. By individually testing the bags we can guarantee that the products are leakproof at the time of dispatching.

! The range of leg bags shown on this page represent the current situation, but it is very likely to undergo changes in near future. We'll keep on offering you bags of a comparable type, but they may vary regarding their specifications.

SAUER sport bag with or without fixed adapter

The sport bag responds to today's need for more flexibility in continence care. Because of their size, they can easily be worn on the thigh under shorts or swimming trunks.

For wheelchair users, able-bodied people and children. Without adapter to be connected to condoms with connecting tube (97.xx, 97.xxxx.xx, 56.xx, 53.xx); with adapter to be connected to all other urinary condoms and catheters.

- Straight or diagonal inlet tube; capacity of 0.5 l
- **Inlet:** with or without fixed adapter, smooth or stepped; non-return valve
- **Outlet:** swing tap or turn tap

	swing tap		turn tap	
Inlet	straight	diagonal	straight	diagonal
no adapter	720.1000-xx	721.1000-xx	720.3000-xx	721.3000-xx
smooth adapter	720.1100-xx	721.1100-xx	720.3100-xx	721.3100-xx
stepped adapter	720.1200-xx	721.1200-xx	720.3200-xx	721.3200-xx

- Available in boxes of 10, 30 or 50. Please replace the “xx” within the order no. for the size of the unit (e.g. 720.1000-30).
- Fixation material for bags: leg straps ► page 35, cotton cover ► page 34.
- Sterile urine collection bags ► page 33.

The sport bags can be worn in the following ways:

- with a wide leg strap with Velcro® strap (57.44, 57.45 or 57.46) directly on the thigh, without cotton cover
- in a cotton cover (70.08) that is attached to the thigh strap with a Velcro® band

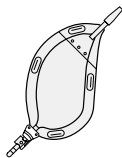

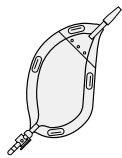

SAUER discreet bag with fixed adapter

The discreet bag is the smallest leg bag we can offer you. Its capacity of 210ml is sufficient for people with drip incontinence, but it can also be used during sport or swimming as inconspicuous interim solution. This small bag responds to today's need for more flexibility in incontinence care. Because of its small capacity it can easily be worn on the thigh, e.g. under shorts or swimming trunks, or directly in the underpant.

For wheelchair users, able-bodied people and for children. Connects to all urinary condoms and catheters.

- Diagonal inlet; capacity of 210ml
- **Inlet:** with fixed adapter, smooth or stepped; non-return valve
- **Outlet:** swing tap or turn tap

	swing tap	turn tap
	 210 ml	 210 ml
smooth adapter	723.1100-xx	723.3100-xx
stepped adapter	723.1200-xx	723.3200-xx

- Available in boxes of 10, 30 or 50. Please replace the “xx” within the order no. for the size of the unit (e.g. 723.1100-30).
- Fixation material for bags: leg straps ► page 35, cotton cover ► page 34.
- Sterile urine collection bags ► page 33.

You can carry the discreet bag in the following ways:

- with a wide leg strap furnished with a Velcro® loop (57.44, 57.45) directly on the thigh
- in the cotton cover (70.08) that is attached to the thigh strap (57.47) with a Velcro® strap
- without strap in the drawers

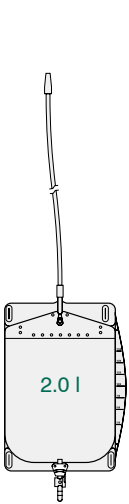

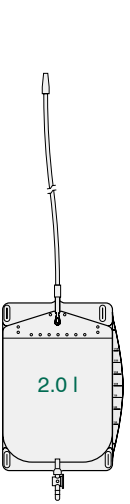

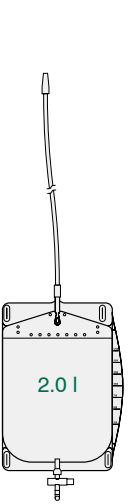

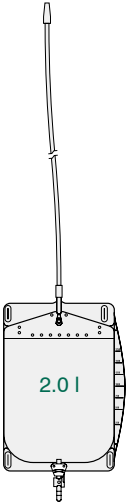

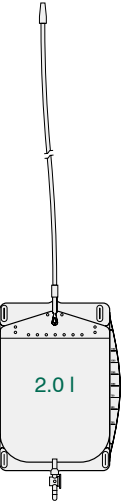

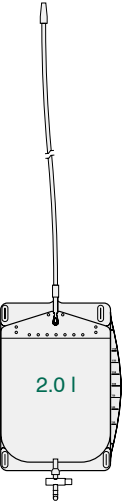

SAUER functional bag with fixed adapter

i We have designed the functional bag to fulfil a demand for night bags with high capacity that can also be attached to the leg when the wearer is up for a short time. Furthermore, the different types of outlet guarantee a higher degree of independence for people suffering from restricted dexterity of the hands. The sterile version of the SAUER Functional Bag is also suited for use with permanent catheters.

For use at night and for bedridden people, with higher capacity. Connects well to all urinary condoms and catheters.

- Rectangular shape; straight inlet; capacity 2,0l, with scale
- **Inlet:** fixed adapter, smooth or stepped; tube either 90 cm or 120 cm, cannot be shortened; non-return valve
- **Outlet:** Swing tap, turn tap or sliding tap

	swing tap		turn tap		sliding tap

SAUER cotton cover

i To avoid direct contact of the urine collection bag with the skin, the bag can be carried in a skin-friendly cotton cover (made of natural cotton, free of bleaching and dyeing substances). The SAUER cotton cover can be used frequently and is washable – an inexpensive and environmentally friendly solution.

The cotton cover doesn't disturb the fixation of the bag to the leg with the corresponding straps. You can wear the cotton cover on the left or on the right leg.

SAUER drip urinal

i For people suffering from partial incontinence (for instance after prostate removal). Designed to hold small amounts of urine for short periods. Also particularly suitable for swimming since the adhesive is waterproof. This urinal is furnished either with self-adhesive urinary condoms “SAUER-Comfort” or with latex condoms that are attached with skin adhesive or double-sided adhesive strips. The self-adhesive condoms are particularly suitable when aiming at a quick and safe solution with as little effort and accessories as possible. The 2-piece condoms allow for a more individual adaptation, as the strength and amount of glue can be chosen regarding the skin conditions. Additionally the adhesive and buffer zone can be positioned to meet individual requirements. The urinal can be closed and emptied with a turn tap or a sliding tap.

The complete months supply for partial incontinence. Condoms, adhesive or strips and taps can be chosen from our range to suit your individual demands.

SAUER drip urinal with self-adhesive condoms – SAUER-Comfort

- 30 condoms
- 1 protective cloths to go with the size of the condom
- 30 turn taps or 30 sliding taps

				Self-adhesive condom					
				97.30					
1	with turn tap	23	+	97	+	30	=	23.97.30	
2	with sliding tap	21	+	97	+	30	=	21.97.30	

The order-no. is composed according to the diagram. The last two figures represent the condom diameter (in mm).

SAUER drip urinal with latex condoms – Original/Extra thin

- 30 condoms
- 1 protective cloths to go with the size of the condom
- 2 tubes of skin adhesive or 30 doubele-sided adhesive tapes
- 30 turn taps or 30 sliding taps

				Skin adhesive		Condom			
				50.01		53.30			
3	with turn tap	23	+	01	+	30	=	23.01.30	
4	with sliding tap	21	+	01	+	30	=	21.01.30	

The order no. is composed according to the diagram. The last two figures represent the condom diameter (in mm). For the extra-thin condoms you have to add a “D” to the end of the order no. (e.g. 23.01.230.D).

■ Turn taps and sliding taps can be individually ordered ► page 39.

Pocket size urinal Uribag

What do you do when you want to spend a penny and no toilet is available? Not only wheelchair users are faced with this situation but also crane drivers, glider pilots and motorists have the same problem.

The Uribag comes to the rescue in an emergency: secure and discreet – it can be folded away and re-used.

The Uribag is available in two different versions for men and women. Both have the following features in common:

- urine bag made of soft latex, can be folded away
- upper rim and cap are made of synthetic material
- closes securely
- high capacity of approx. 1 litres
- can be re-used

The difference between the two lies in the shape of the top part. For men this is cylindrical, for women it is adapted to their body shape.

Uribag for men 1 piece

☒ **Order no. 999.806**

Uribag F for women 1 piece

☒ **Order no. 999.808**

URibag

999.806

999.808

1 The cap closes the Uribag securely. With the Uribag for men it is secured by a connecting piece so that it can't get lost.

2 The tube is made of synthetic material.

♂ For men it has got a cylindrical shape (length approx. 8 cm, diameter 4 cm);

♀ For women the anatomical design fits comfortably.

3 The collector bag is made of soft latex and can hold 1,2 l of fluid.

☞ The collection bag can be folded away completely into the tube.

How to use it

Open the cap and take the bag out of the tube. After use wash in warm soapy water. Let the bag dry before folding.

☒ The article cannot be returned.

Latex urinal

Until 1980, the latex urinal was the standard system used for bladder incontinence. However, as a result of clinical tests, the latex urinal was replaced by a PVC (single-use) disposable system. The reason was not only the easier handling, but it reduces the additional sources of infection in clinics, prevents bladder infection, supports and aids the medical treatment of infected urine, and dispenses with the need for the necessary cleaning of the latex urinal.

For the condoms without connecting tubes we offer the same latex qualities and condom sizes as for the condoms with a connecting tube linked to the condom by a nipple (► page 11). They are individually tested and rolled up.

☒ The article cannot be returned.

We have developed the KIC-System for patients that are either incontinent between catheterisation intervals or that achieve continence only with medication, which they cannot or will not tolerate because of side effects. These people would have to put on a new condom several times a day after each catheterisation.

KIC-System

The solution for combining condoms and intermittent catheterisation.

In the KIC-System, we have a removable connector instead of a fixed tube to connect the leg bag. This connector can be removed from the urinary condom and, using the special condom expander tool, the condom can then be pulled over the penis shaft so that the penis tip is left free for disinfecting and catheterisation. Afterwards, the urinary condom can be restored to its original position and connected to the existing drainage system. This procedure can be repeated any number of times.

With the KIC-System, you only need one urinary condom per day – this not only protects the skin but it can also save a lot of money.

The KIC condom expander is made of sturdy plastic material and can be used over a longer period of time (for several months).

The KIC condoms have a reinforced outlet, which can be stretched considerably but always goes back to its original shape. The opening does not tear when handled with care. There is a choice of 11 sizes in the “Original” version and of 3 sizes in the “Extra thin” version.

The KIC connector replaces the connecting tube that the urinary condom is usually furnished with. This allows you to separate the inlet tube of the leg bag from the urinary condom in order to expand the condom with the condom expander tool and then pull it back over the penis tip.

Cleaning and disinfecting KIC condom expanders and KIC connecting tubes are easy to clean with common disinfectants. Just follow the disinfectant manufacturer’s instructions.

Aids for ISC

You can find further articles for bladder catheterisation in a separate catalogue or on our homepage:
www.sauercontinence.com

Advice

For further information about our KIC-System, please contact your local continence adviser for further information ► page 48.

KIC-System

The system consists of three components: the KIC condom expander, KIC condoms and the KIC connector. We provide sufficient connectors and connecting tubes with our KIC condoms. However, you can order them separately if necessary.

KIC condom expander
